

Conversion for Mils to Square feet per Mixed Gallon for Milamar PM Product Line

To achieve this wet Mil thickness (WFT)	Apply at this rate per mixed gallon
4 mils	400 square feet
5 mils	320 square feet
6 mils	266 square feet
7 mils	230 square feet
8 mils	200 square feet
9 mils	180 square feet
10 mils	160 square feet
15 mils	106 square feet

If your batch is 1.5 gallons multiply square feet by 1.5 for coverage for total area it will cover.

i.e. To achieve 8 wet mils, mixing one gallon of Part A PM 200 with ½ gallon of PM 200 Part B, take total batch mixed 1.5 gallons x 200 square feet per mixed gallon = 300 square feet coverage

Note: these coverages are theoretical and do not account for concrete porosity, and liquids left in rollers, pails and trays. Coverages based on wet application thickness not dry film thickness. All coverages in Milamar PM application literature are based on wet film thickness.
