

The hunt
for camo
flooring
is over.

SUPERCOAT Camo Series

*Chip image for presentation only

SUPERCOAT™ Camo Series is the answer to hundreds of flooring needs. From garages and basements to man-caves and sheds. SUPERCOAT Camo is ideal for protecting the floor while creating a clean, attractive finishing touch.

Available in 3 camo blends, SUPERCOAT Camo Series is resistant to damage caused by most chemicals, such as: gasoline, brake fluid, standing water, battery acid and even biological fluids. It is far superior to traditional floor paint and is stronger than many heavy-duty industrial coatings. Known as the "Breathable Epoxy", SUPERCOAT is the

only product to feature WET Chemistry, which ensures that the coating won't chip, peel or blister due to water vapor migration through the concrete.

Each kit of SUPERCOAT Camo Series covers approximately 250 sq. ft. (about a single-car garage) and comes complete with decorative flakes, a cleaner/de-greaser, a non-slip aggregate and detailed instructions. In addition, a variety of optional clear glaze coats are available to encapsulate the flakes and give your floor an even higher gloss finish.

SUPERCOAT Camo Series is as easy to apply as paint after minimal surface preparation. No acid etching or mechanical prep is necessary in most cases. Floor preparation, of course, is the most important step because SUPERCOAT Camo Series' bond is dependent upon the substrate's condition.
